Abstract

[enter your Abstract here]

Plain Language Summary

[enter your Plain Language Summary here or delete this section]

1 Introduction

2 Methods

2.1 Grids

2.2 Dynamical cores

2.2.1 *Finite-volume model*

2.2.2 *Spectral-element model*

2.3 Physical parameterizations

2.4 Observational datasets

2.4.1 *ERA5*

2.4.2 *LIVVkit 2.1*

2.5 TempestExtremes

2.6 Storm-compositer

3 Results

3.1 Tropospheric temperatures

3.2 Synoptic-scale storm characteristics

3.3 Orographic gravity waves emanating from Greenland

3.4 Katabatic winds emanating from Greenland

3.5 Greenland surface mass balance

4 Conclusions

Acknowledgments

This material is based upon work supported by the National Center for Atmospheric Research (NCAR), which is a major facility sponsored by the NSF under Cooperative Agreement 1852977. Computing and data storage resources, including the Cheyenne supercomputer (doi:10.5065/D6RX99HX), were provided by the Computational and Information Systems Laboratory (CISL) at NCAR.

The data presented in this manuscript is available at <https://github.com/adamrher/2020-arcticgrids>.
